SUMMARY

Information Technology student (B.S., May 2027) who ships full-stack applications across the .NET, Node.js, and PHP ecosystems, backed by coursework in networking, database design, and system administration. Recent work includes an AI-powered rubric compliance checker pairing an ASP.NET Core 8 MVC web app with a Python FastAPI service and a containerized SQL Server database. Seeking a software engineering, IT, or cloud internship.

TECHNICAL SKILLS

Languages: C#, Python, JavaScript, PHP, SQL, PowerShell, HTML/CSS, TypeScript (familiar)

Frameworks & Web: ASP.NET Core 8 MVC, FastAPI, Node.js/Express, React, REST API design, JSON, responsive web design

Databases: SQL Server, MySQL, Entity Framework Core, relational modeling, normalization, complex SQL queries

Cloud & DevOps: Docker, Git/GitHub, GitHub Actions, GitHub Pages, Azure App Service (learning), Postman, VS Code, Visual Studio

AI Engineering: LLM API integration, prompt engineering, structured output parsing, AI service architecture, AI-assisted development

Systems & Networking: Office 365, VMware/Omnissa, Cisco Packet Tracer, TCP/IP, LAN/WAN, VPN, switching & routing, OSI model

EDUCATION

The University of Toledo — Toledo, OH

Bachelor of Science in Information Technology | Expected May 2027

Relevant Coursework: Database Systems, Web Application Development, Networking, System Administration, Scripting

PROJECTS

RubricGuardian — AI Assignment Compliance Checker | *ASP.NET Core 8 MVC, Python FastAPI, SQL Server, Docker, EF Core, LLM API*

- Built a full-stack tool that checks student assignment submissions against instructor rubrics and returns structured, criterion-by-criterion feedback instead of a single opaque score.
- Architected a two-service system: an ASP.NET Core 8 MVC web application handling authentication, submissions, and results, communicating over REST with a separate Python FastAPI service that runs the LLM analysis pipeline.
- Modeled the data layer with Entity Framework Core against SQL Server running in Docker, using code-first migrations and seeded demo data for reproducible local setup.

Timalsina Masala Pasal — E-Commerce Web Application | *Node.js, Express, JavaScript, REST APIs*

- Developed and deployed a production e-commerce site for a family-owned spice shop, including a product catalog, order tracking, admin dashboard, and sales analytics.
- Hardened the backend with session-based admin authentication, server-side price recalculation to prevent client-side tampering, rate limiting, security headers, and image upload handling via Multer.

MedRx — Pharmacy Database System | *PHP, MySQL*

- Designed a normalized relational schema for prescription, patient, and inventory management, then implemented it behind a PHP application with role-based access for pharmacists and administrators.

Developer Portfolio & Field Journal | *React, TypeScript, Vite, Tailwind CSS, JavaScript*

- Built and deployed a React/TypeScript portfolio to GitHub Pages with a custom design system and a data-driven project catalog.
- Developed Field Journal, a responsive multi-page travel site featuring interactive galleries, charts, accordions, and dynamic UI components in vanilla JavaScript.

The Garage — Used Car Dealership Website | *HTML, CSS, JavaScript*

- Built a responsive multi-page dealership site presenting inventory, services, and business information with a mobile-first layout.

EXPERIENCE

Student Worker | The University of Toledo / Chartwells, Toledo, OH | Jan 2023 – Dec 2023

- Delivered customer service in a high-volume campus dining environment while maintaining accuracy under time pressure.
- Troubleshooted day-to-day operational issues and coordinated with teammates to keep service workflows running efficiently.

LEADERSHIP & ACTIVITIES

- Active member, International Student Association — supported campus events and student engagement initiatives.

- Independently designed, developed, and deployed a live website for a family-owned business, handling requirements, build, and hosting end to end.
